

Warm Up

- Complete the warm up in your journal!

Use the FOIL Method or the Box Method to simplify the following binomials:

$$(x-3)(x+4)$$

	x	-3
x	x^2	$-3x$
4	$4x$	-12

$x^2 + x - 12$

$$(x-7)(x-6)$$

	x	-7
x	x^2	$-7x$
-6	$-6x$	42

$x^2 - 13x + 42$

$$(2x+4)(2x+3)$$

$$4x^2 + 6x + 8x + 12$$

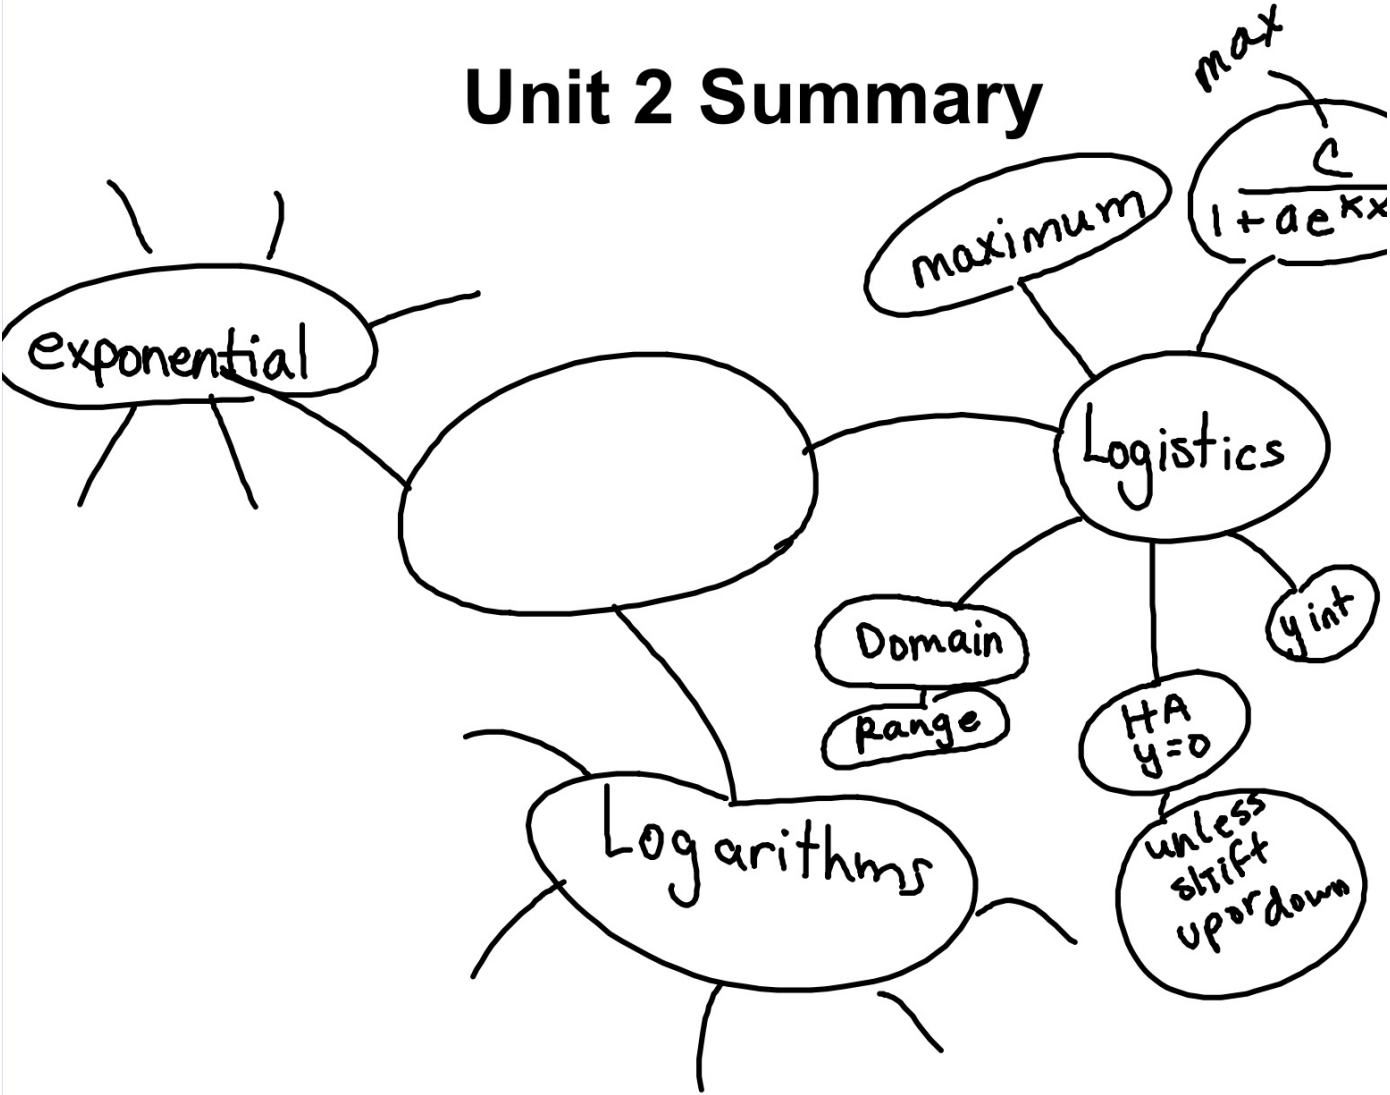

$4x^2 + 14x + 12$

$$(3x-1)(x+5)$$

$$3x^2 + 15x - x - 5$$

$3x^2 + 14x - 5$

Unit 2 Summary

Say, Cube, do you consider yourself to be religious?

I believe there are higher powers than us, if that's what you mean.

When your entire friend group thinks maths is useless

The Unit Organizer

④ BIGGER PICTURE

NAME _____
DATE _____

Honors PreCalculus

2: Expo, Log, Logi

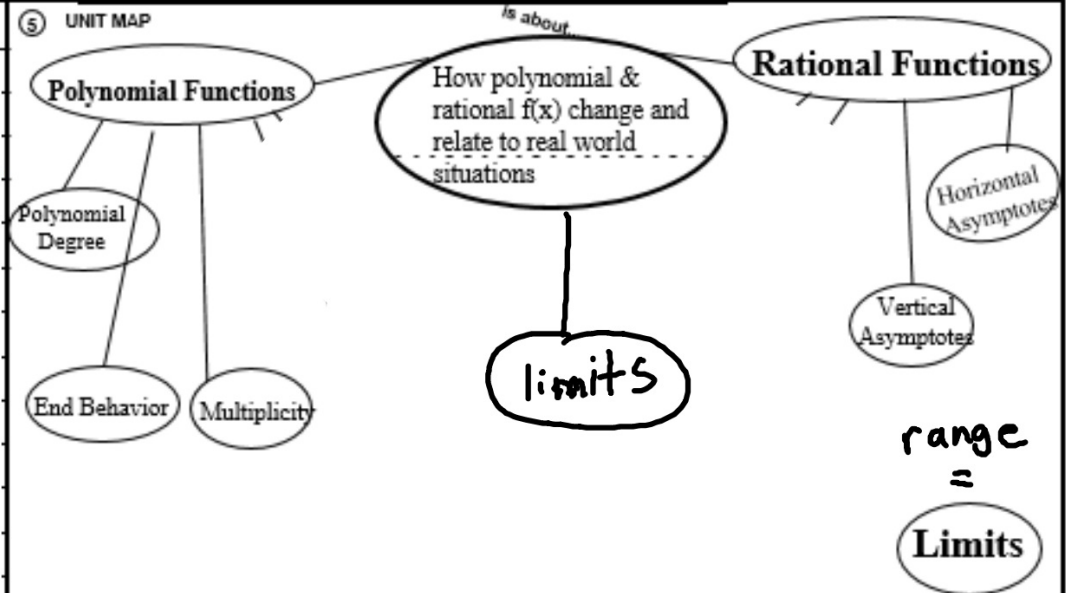

3: Polynomial and Rational f(x)s

4: Trigonometry

⑧ UNIT SCHEDULE

- 1 Vocab
- 2 Polynomials
- 2 Rationals
- 1 Limits

⑤ UNIT MAP

⑦ UNIT SELF-TEST QUESTIONS

1. How can I analyze polynomial & rational functions?
2. How can I find factors of functions?

- Evaluate
- Graph & Transform
- Relate
- Apply

⑥

UNIT RELATIONSHIPS

3.0 vocabulary words

Polynomial Key Concepts

- Polynomial Degree
- End Behavior
- Standard Form
- Factored Form
- X Intercepts
- Y Intercept
- Multiplicity
- Leading Coefficient = a

Rational Key Concepts

- x intercepts
- y intercepts
- horizontal asymptotes
 - BOBØ
 - EATS DC
 - BOTN
 - BOTS
- vertical asymptotes

3.1 Polynomial Functions

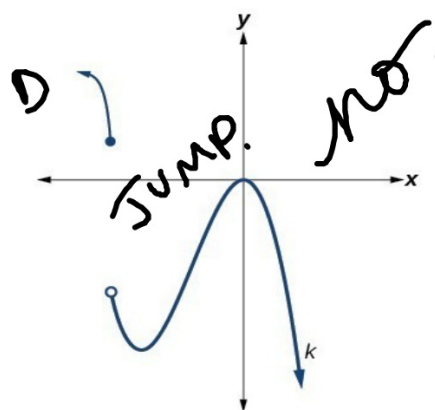

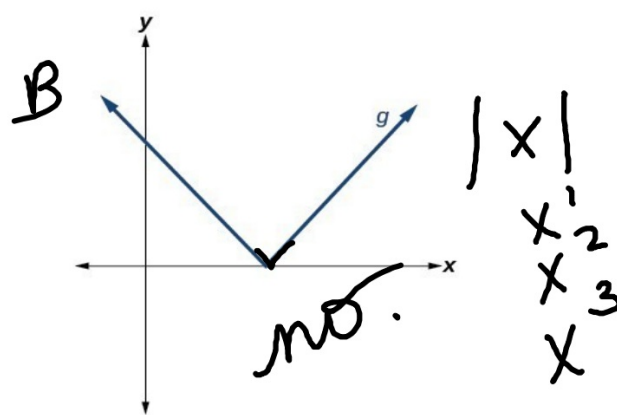

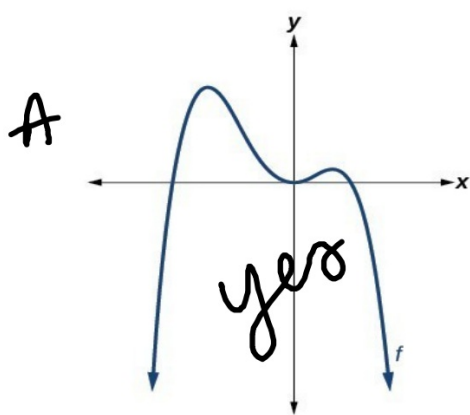

any function where there is a power that is a number; graphs are continuous, and do not have sharp turns

Standard Form: $f(x) = x^2 + 2x - 3$ polynomial degree

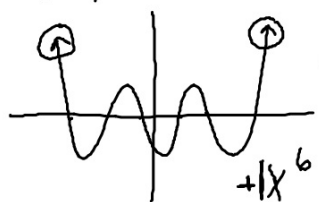

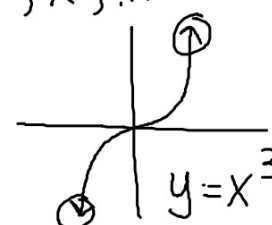

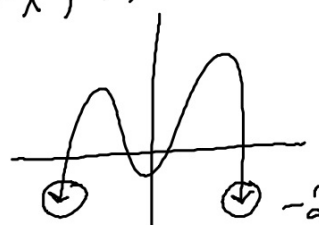

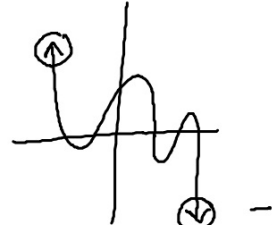

Factored Form: $f(x) = (x - 1)(x + 3)$

Are the following polynomial functions?

3.1 Polynomial Degree & End Behavior

<p>X^2, X^4, \dots + Even</p> <ul style="list-style-type: none"> • ends match $(+\infty)$ • endpoint up  <p>$+1x^6$ LC = +1</p>	<p>X^3, X^5, \dots + Odd</p> <ul style="list-style-type: none"> • ends are opposite left side $\rightarrow -\infty$ right side $\rightarrow +\infty$ • LC = +1  <p>$y = x^3$</p>
<p>Polynomial Degree helps determine the shape of graph, end behavior. LC helps determine "direction"</p>	
<p>$-X^2, -X^4, \dots$ - Even</p> <ul style="list-style-type: none"> • end match $(-\infty)$ • endpoints down b/c  <p>$-2x^4$ of LC = -2</p>	<p>$-X^3, -X^5, \dots$ - Odd</p> <ul style="list-style-type: none"> • ends are opposite left side $\rightarrow +\infty$ right side $\rightarrow -\infty$ • LC = -3  <p>$-3x^5$ • LC = -3</p>

**Are the following even or odd?
Positive or negative?**

X Intercepts & Multiplicity

cross	bounce	wiggle

3.1 Write a Polynomial Equation from a graph

3.1 Write a Polynomial Equation from a graph

What might the equation of this graph be?

There is an additional piece of information on this graph.

Project Work Example Step 3

Wipplez

initial day $(0, 4)$

next day $(1, 20)$

$y = ae^{rt}$ years

$20 = 4e^{r(1)}$

$5 = e^r$

$\ln 5 = r$

$1.609 = r$

$y = 4e^{1.609t}$

$160.9\% = r$

CM: 2 Kiwis 100 per day

$\frac{100}{2} = 50$ wipplez

$y = 4e^{1.609t}$

$50 = 4e^{1.609t}$

$12.5 = e^{1.609t}$

$2.526 = 1.609t$

$1.569 = t$ days

1.5 days to reach CM.

Threshold = 100 wipplez

$y = 4e^{1.609t}$

$100 = 4e^{1.609t}$

$25 = e^{1.609t}$

$\square = t$

Name _____

Objective 3.1: Creating Equations using Polynomial Degree, Multiplicity, & concepts

Unit 3

Factored Form

Standard Form

3.1 Creating Polynomials Examples & Practice

1. A function has the zeros 3, 6 and 1. Create a polynomial that has these zeros.

2. Create a polynomial that has the zeros 3, 6 and 1 and contains the point (4, 12)

3. What is an equation for this graph:

4. Create a polynomial that has the x-intercepts $(4, 0)$, $(-2, 0)$ and $(2, 0)$ and the y-intercept $(0, 16)$.

5. Create a polynomial, $f(x)$, that has zeros 2 and 3 and $f(4) = 10$

P-I-G Practice

- **Complete the problems**
- **Check your work!**
- **Communicate effectively**

Exit Task: Investigate the potential polynomial equation of this graph based on what you learned in class today. Write a letter to your favorite celebrity explaining your thoughts. Provide examples to really help them understand the math!
