8.1 I can:

1. plot polar points on a map

Why?

Use of polar coordinates sometimes simplifies complicated rectangular equations.

NCSCOS

2.05 Use polar equations to model and solve problems.

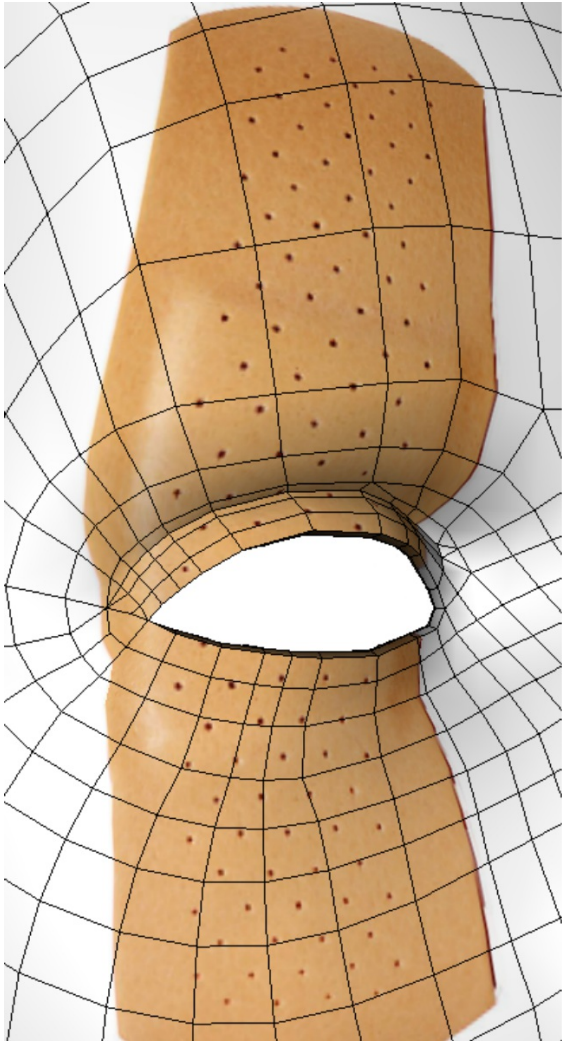

a) Solve using graphs and algebraic properties.

b) Interpret the constants and coefficients in the context of the problem.

Where Are Polar Coordinates and Graphs Used in the Real World?

- Radar measures the things it is tracking by the angle and distance from the antenna. This maritime navigation radar shows the ship's position in the center of the display and other ships and land as distance and direction from the ship. (The straight lines attached to the other ships are computerized course projections for those ships.)

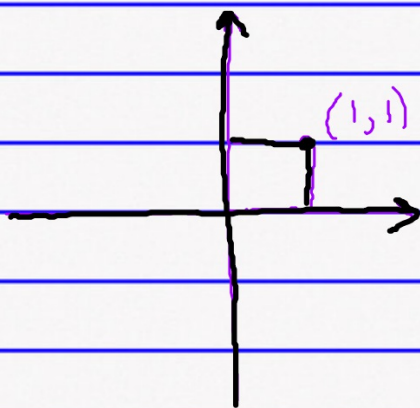

Polar coordinates are...

An extension of the Unit Circle!

Cartesian Plane Rectangular

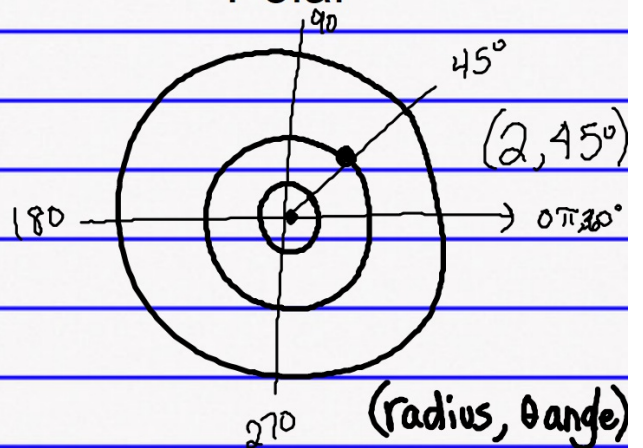

(x, y)

= cartesian coordinates

= rectangular coordinates

Circular Plane Polar

$(r, \theta) \leftrightarrow (\theta, r)$

= polar coordinates

= (some distance, at some angle)

What is the difference between the two type of planes?

The Polar Bear

Like the Cartesian Bear,
but with transformed coordinates

Dr Mike's Math Games for Kids <http://bit.ly/XVYKLh>

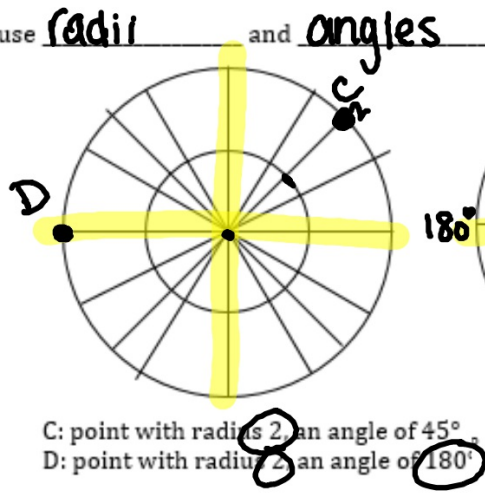

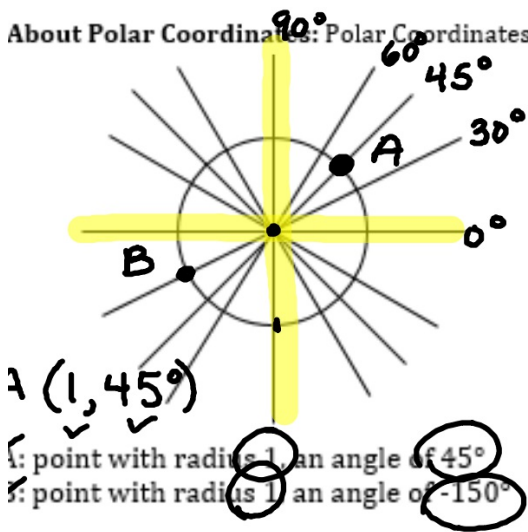

**I WAS GRAPHING
POLAR EQUATIONS**

**SO I PUT ON A
COAT**

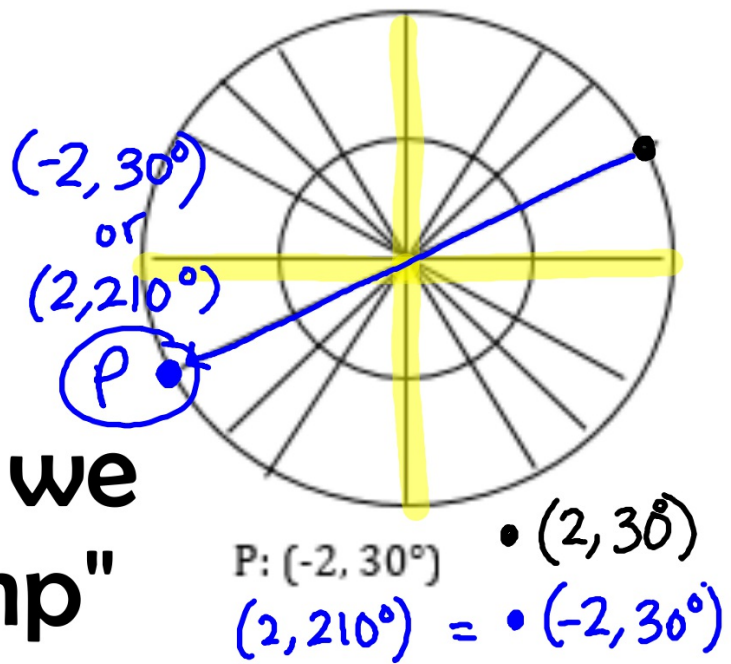

HIGH SCHOOL MEMES

About Polar Coordinates: Polar Coordinates use radius and angles to find points on a circle.

Practice Points:

In this case, the radius is negative, so we need to "jump" to the opposite side of the angle!

Team Tasks

- complete all points
- provide 2 others ways to write 3 coordinates

A: $(3, 45^\circ) \longrightarrow (3, \frac{\pi}{4})$ or $(-3, 225^\circ)$ or $(3, 405^\circ)$

B: $(2, 300^\circ)$

C: $(4, \frac{\pi}{2})$

D: $(1, -30^\circ)$

E: $(5, -120^\circ)$

F: $(2, -\pi)$

G: $(3, 540^\circ)$

H: $(1, 480^\circ)$

I: $(2, \frac{10\pi}{3}) \cdot \frac{180}{\pi} = \frac{1800}{3} = 600^\circ$

te the coordinates of each point TWO different ways.

A: $(5, 45^\circ)$ or $(5, \frac{\pi}{4})$
 $(-5, 225^\circ)$

B:

C:

D: $(3, 210^\circ)$

E:

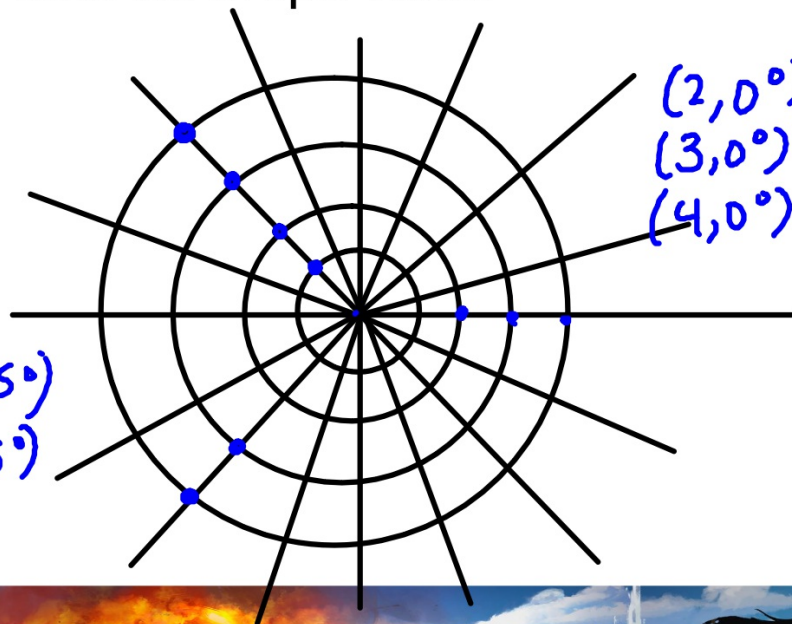

Polar Coordinate Battleship!

- Pick 1 partner!
- Play battleship!
- First person to sink all ships wins!

$(1, 135^\circ)$
 $(2, 135^\circ)$
 $(3, 135^\circ)$
 $(4, 135^\circ)$

$(3, 225^\circ)$
 $(4, 225^\circ)$

$(2, 0^\circ)$
 $(3, 0^\circ)$
 $(4, 0^\circ)$

Exit Journal

1. Explain the difference between polar and cartesian planes.

2. Plot these points:

a. $(4, 30)$

b. $(-2, 90)$

c. $(3, -135)$
